Automatic correction of image perspective for photos in Spike Cloud

The Correct Perspective feature will improve the accuracy of your measurements along with helping to save you time measuring your photos.

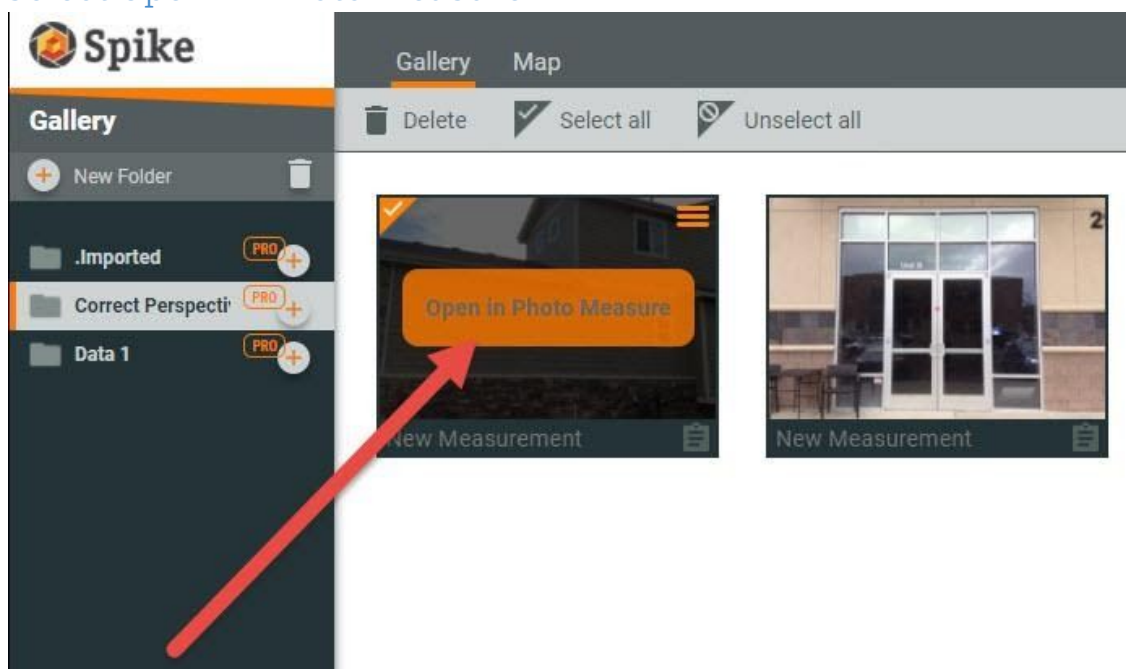

Instead of manually correcting the perspective of a photo by drawing an alignment rectangle, you can now use the Correct Perspective (beta) button. When you use the Correct Perspective feature, Spike will automatically correct the perspective of a photo, ensuring greater accuracy of measurements. Then you can immediately start taking measurements.

How to use the Correct Perspective feature in Spike Cloud

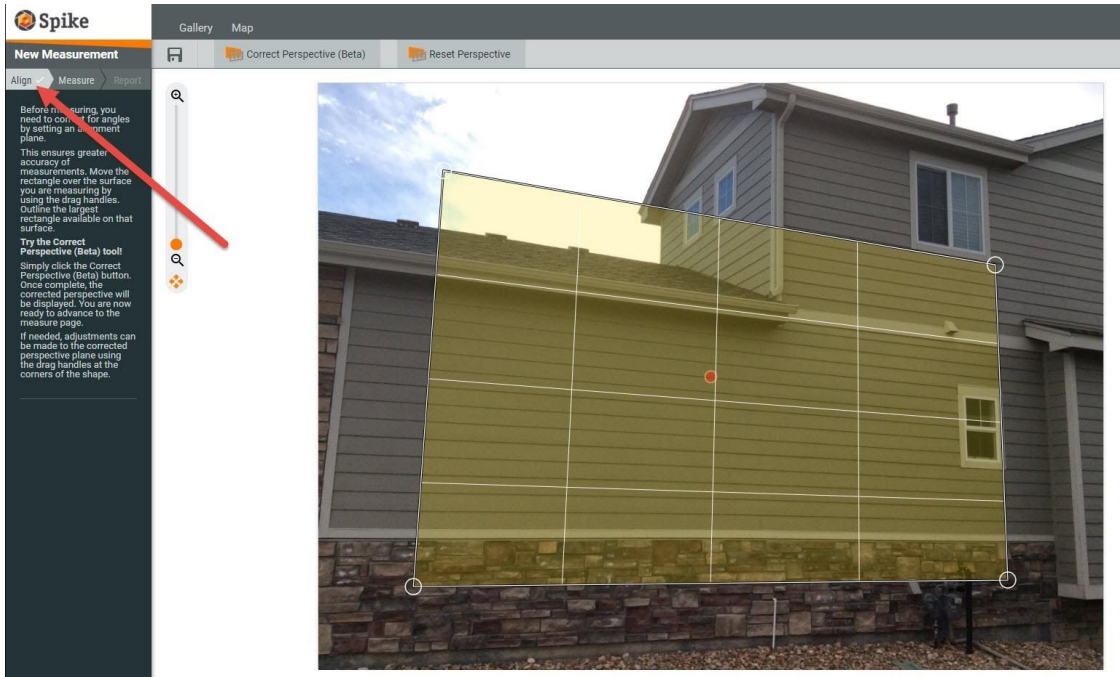

1. Access an image that has been uploaded to the Spike Cloud.

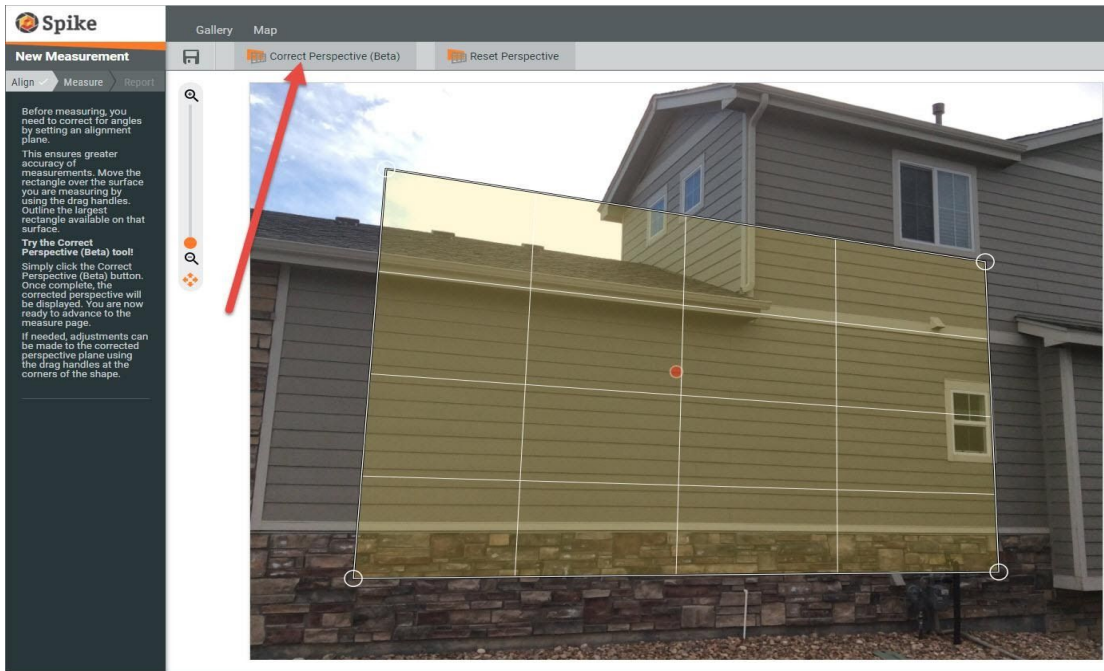

2. Select Open in Photo Measure

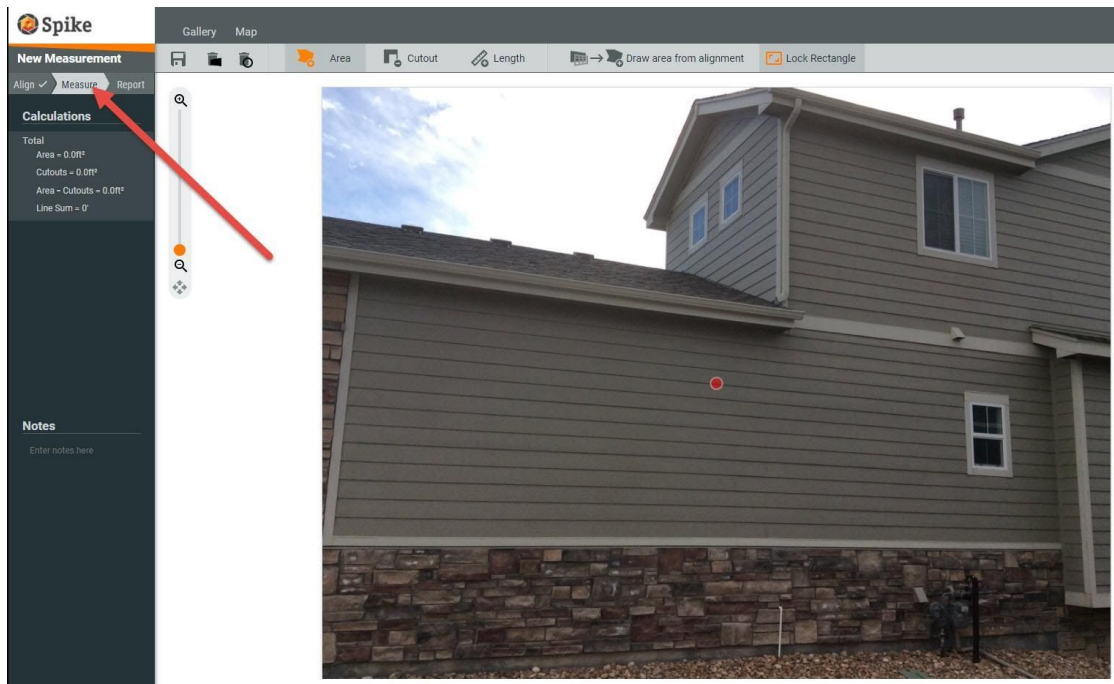

3. Select the Align Button: The Correct Perspective will be applied during this action.

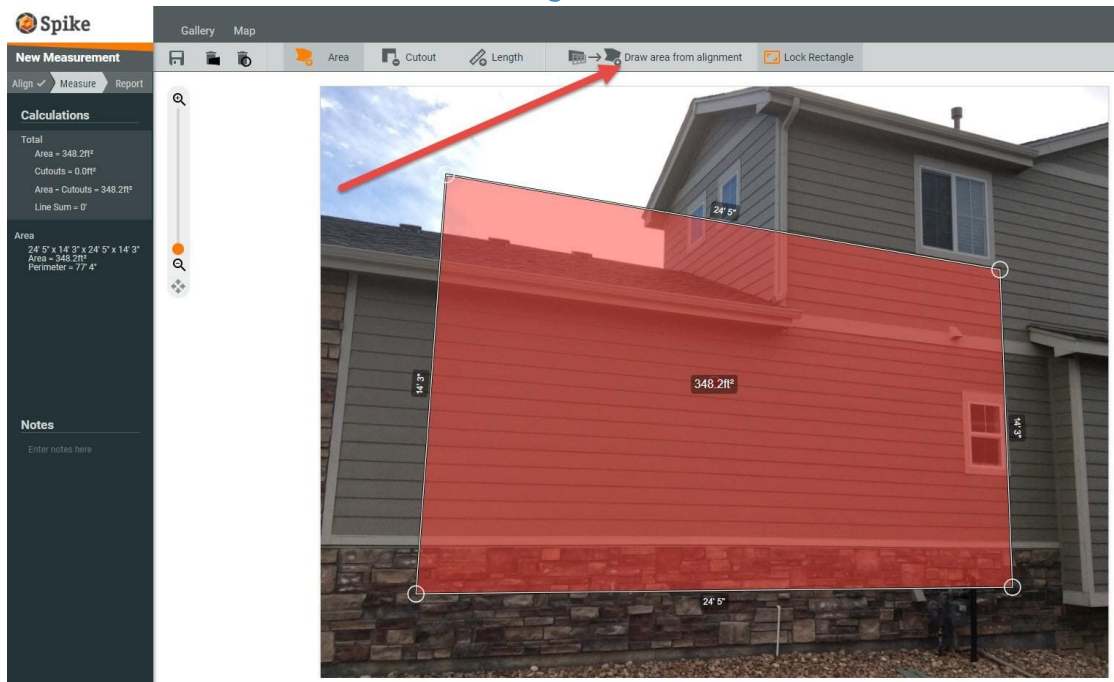

4. Select the  Correct Perspective (Beta) Button

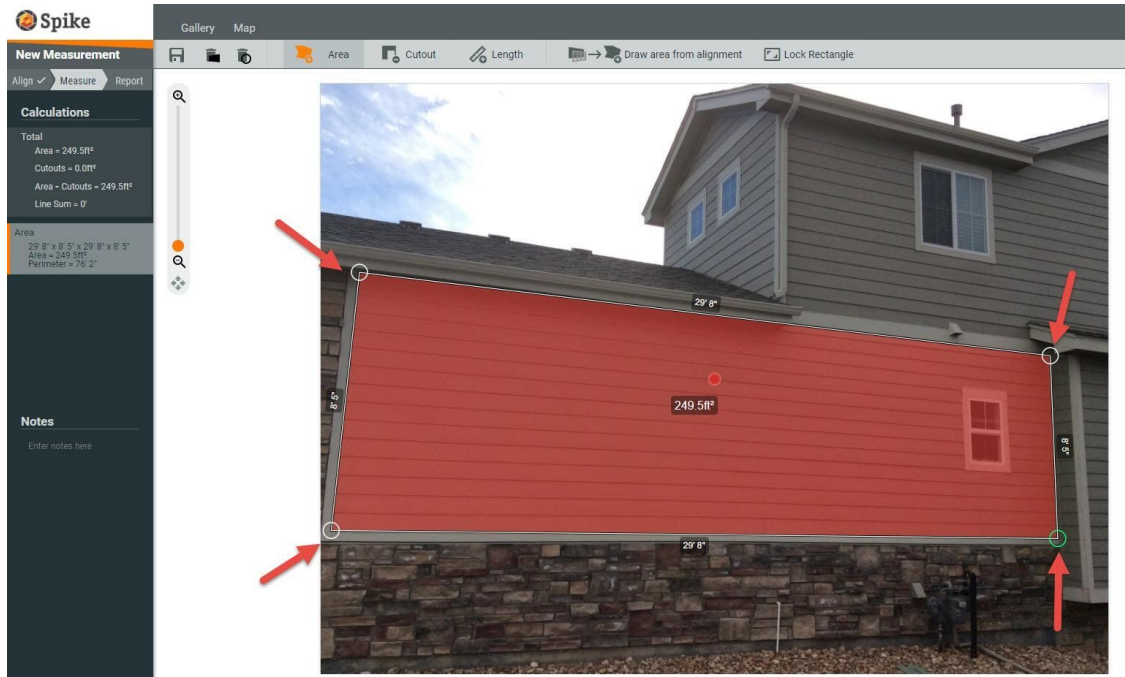

5. Select the Measure Button

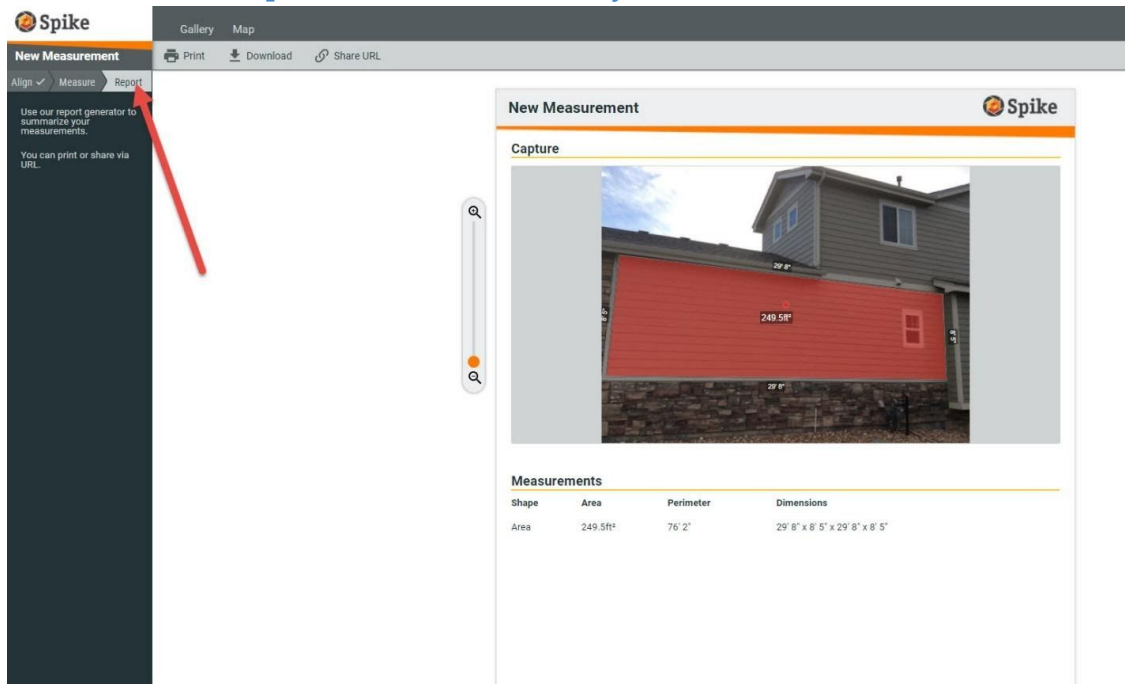

6. Select the Draw area from alignment Button

7. Adjust the area to represent the desired "Area of Interest"

8. Select the Report Button to view your measurements.

Access and availability

The Correct Perspective feature is available only to Spike Cloud Pro Plan subscribers, and to anybody who signs up for the 30-day trial of the Pro Plan
