

Mounting Your Spike: Tablets

ikeGPS

By: Spike Support
For: Spike for Tablets
Date: 7/20/2020

We recommend attaching your Spike to a hard tablet case (or smartphone case for first generation Spike) with a flat back, and to metal or hard plastic surfaces. Avoid Silicon-based cases. You may wish to use two cases – one with the Spike attached to it and the other for general day-to-day use. Your Spike comes with strong double-sided adhesive tape for attaching Spike to a case.

We recommend attaching Spike to your tablet case as close as possible to the camera, but not obstructing the camera. Spike may be orientated in a position that is most comfortable when holding your tablet in landscape.
